

Installing R and RStudio: Step-by-Step Guide

- This document provides instructions for *installing R and RStudio*.
- Follow the steps below carefully and **install R** before **installing RStudio**.

STEP 1: INSTALL R

1. Open a web browser and go to: <https://www.r-project.org>
2. Click on “CRAN” (Comprehensive R Archive Network).
3. Choose a mirror close to your location (any mirror works).
4. Select your operating system:
 - Windows
 - macOS
 - Linux
5. Download the latest version of R.
6. Open the downloaded file and install R using the default options.
Click “Next” until the installation is complete.

At this point, R is successfully installed on your computer.

STEP 2: INSTALL RSTUDIO (THE INTERFACE)

1. Open a web browser and go to: <https://posit.co/downloads/>
2. Under “RStudio Desktop,” click Download (Free version).
3. Select the version that matches your operating system.
4. Open the downloaded file and install RStudio using the default settings.

STEP 3: OPEN RSTUDIO

Once installation is complete:

- Open RStudio.
- You should see four main panes:
 - Source
 - Console
 - Environment/History
 - Files/Plots/Packages/Help/Viewer/Presentation

If RStudio opens without errors, the installation was successful.

STEP 4: VERIFY THE INSTALLATION

In the Console pane, type the following command and press Enter: **version**

If R responds with version information, everything is working correctly.

IMPORTANT NOTES

- Always install R before installing RStudio.
- Use default options during installation.
- Administrator permission may be required on some computers.

FINAL REMINDER

You only need to install R and RStudio once.

You are now ready to begin.
